

PRE-CLASS ASSIGNMENT SESSION 20242025 SEM 02	
SUBJECT CODE	: GLRB0010
SUBJECT TITLE	: DESIGN THINKING FOR ENTREPRENEUR
SECTION	: 1
STUDENT'S NAME	: GOE JIE YING
MATRIC NO.	: A23CS0224
PROGRAME	: BACHELOR OF COMPUTER SCIENCE (DATA ENGINEERING)
LECTURER'S NAME	: ASSOCIATE PROFESSOR DR CORRIENNA ABDUL TALIB
DATE OF SUBMISSION	: 31 OCTOBER 2025

1. 3 things I learned

- Design thinking can be applied not only in design but in everyday life. It is very useful to solve problems.
- Empathy can be used to solve any problems. Before making a solution, we should imagine it from multiple perspectives to inspire our innovation and provide an user-friendly solution to the client.
- For every design, design thinking should be starting from the beginning, then focus on a human-centered approach. After that, do prototyping and testing with real users early to get their feedback for improvement.

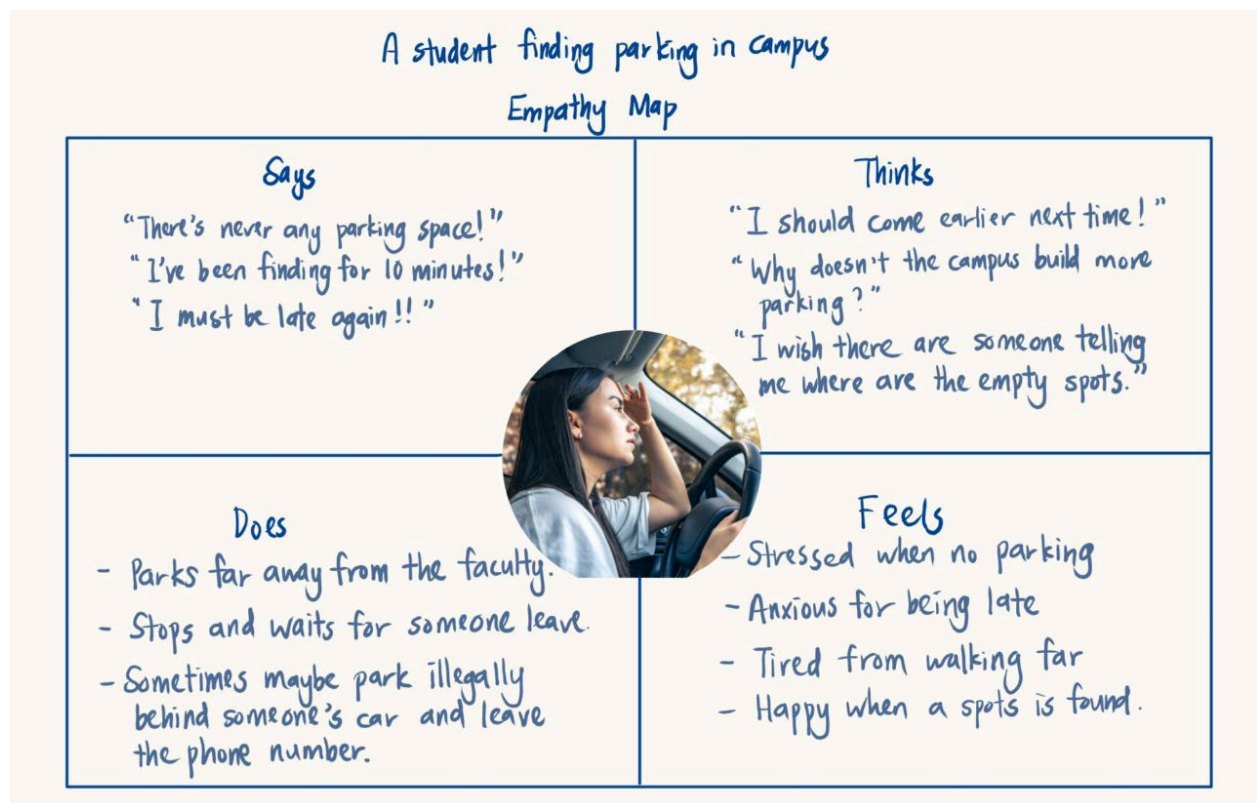

2 ways the article influences reader expectations:

- It encourages the reader to make design thinking as part of the innovation as it helps the reader to explore more ideas more quickly.
- It shows that creativity is a structured, systematic and human-centered process. For example, design thinkers begin from empathy, integrative thinking, optimism, experimentalism and lastly collaboration. From this cycle, a great design would be innovated.

1 Idea I want to explore further:

- How design thinking can be applied in another field except design

2.

3. They had to redesign the shopping cart in just five days and create one that meets most people's needs, such as child safety and convenience. IDEO used the Design Thinking process to guide their work, encouraging team collaboration, creativity, and user-centered design throughout the project. The redesigned cart featured wheels that could turn 90 degrees, allowing it to move sideways and avoid frustration in tight spaces. In addition, shoppers could choose how they wanted to shop, either by placing items in the basket or hanging plastic bags on hooks attached to the cart frame. From this video, I learned that teamwork is the most important element in group work. In this case, their diverse team helped them better understand user needs.

4.
