SESSION 2024/2025 - SEMESTER 1

ALTERNATIVE ASSESSMENT REPORT: PHASE 2

Name	GOE JIE YING
IC No. / Matric No.	040622-01-0526
Year / Program	2/SECPH
Section	1
Lecturer Name	MS. ROZILAWATI BINTI DOLLAH @ MD. ZAIN
Case Study	Member Management Module
System Name	KKK Online System
Group Name	Tech Hi-Five

SECTION C (SQL AND INTERFACE IMPLEMENTATION)

3.1 SQL Statement

3.1.1 DDL

```sql
CREATE TABLE `tb_tarikdiri` (
  `td_tarikdiriID` int(11) NOT NULL,
  `td_memberNo` int(11) NOT NULL,
  `td_alasan` varchar(255) NOT NULL,
  `td_submitDate` datetime DEFAULT NULL,
  `td_status` int(11) NOT NULL,
  `td_approvalDate` datetime DEFAULT NULL,
  `td_ulasan` varchar(255) DEFAULT NULL,
  `td_adminID` int(11) DEFAULT NULL

)
```

MySQL returned an empty result set (i.e. zero rows). (Query took 0.0014 seconds.)

```sql
SELECT * FROM `tb_tarikdiri`
```

Profiling [Edit inline] [Edit] [Explain SQL] [Create PHP code] [Refresh]

td_tarikdiriID	td_memberNo	td_alasan	td_submitDate	td_status	td_approvalDate	td_ulasan	td_adminID

```sql
ALTER TABLE `tb_tarikdiri`
  ADD PRIMARY KEY (`td_tarikdiriID`),
  ADD KEY `td_status` (`td_status`),
  ADD KEY `td_memberNo` (`td_memberNo`);
```

SECTION D (CONCLUSION AND REFLECTION)

4.1 Conclusion

This assessment successfully developed a member management module that makes member resigned process run smoothly. From the member's perspective, since they log in to their own account, their personal information is already saved in the database. This eliminates the need for repeated data entry when submitting resignation requests. Members can easily request to stop their membership without re-entering details.

From the admin side, even if the member does not provide complete details, the necessary information can be retrieved directly from the database, which will help to reduce admin's workload. After the admin approves or rejects a resignation request, the result is immediately reflected in the database. Approved members appear in the "Senarai Anggota Lepas" (Past Member List", while rejected applications are sent back to the members with their updated status. Additionally, on the "Senarai Anggota Semasa" (Current Members List), the admin can perform the action to update a member's status to "Resigned" or "Retired."

Despite its success, the project may require handling a large volume of data as the organization grows. For example, there may be some situations that we were not considering now, such as multiple status happens on a single member and the total number of members can be displayed in list. It would be a big challenge when it started to be used.

Furthermore, security concerns must be addressed. The database contains sensitive member information, additional layers of data encryption are necessary to be implemented to secure the data protection.

However, this project contributes to the organization management system. It provides an automated digital management platform for the administration to reduce human errors and improve efficiency. Besides, the database unified all member information, loan information and offering easy access for the admin throughout the system.

To further enhance the system's utilities, advance security measure should be integrated to protect the database of the members of KKK. The database's scalability also should be considered to support larger datasets. Other than that, a mobile-friendly application can be developed to ease both administrator and member.

4.2 Reflection

Pure Fact:

This project involved developing a member management module to keep the resignation process and the retired process smoothly. Member can submit resignation through their account easily. Admin could choose to approve or reject the application, with the decision and member status automatically updated in the system. Approved members were added to the "Senarai Anggota Lepas" (Past Members List), while rejected requests were sent back to the members. When the admin wants to access member information, they can just open the list and view all necessary details.

Feelings:

At the beginning of the project, I felt uncertain because I initially believed there were no significant issues with the existing system. However, I try not to think from my side upon considering the user perspective, I discovered that the admin lacked the ability to manipulate the member list and manage the member information. It could lead to problems when they really take over the system. Therefore, I decided to develop this member management module.

During the process of planning the new table in database, I feel happy and satisfied as I could see the system improving with each step. I faced some challenges when thinking about the structure of the table and knowing what is essential to be included in. After several hours of brainstorming and analysis, I successfully designed the table, and here comes the tb_tarikdiri. Nonetheless, I felt challenged by concerns about the system's ability to handle larger datasets in the future. I hope that one day that will be coming soon, my teammates and I will know and can solve this.

Evaluation:
For the retired member management part, due to my unfamiliarity with the real process, I questioned our client during the presentation to gain more clarity. Although this provided some insight, I realized during development that managing the retired members in the database would still pose challenges. One of the issues we encountered was how to handle retired members who could withdraw their dividend shares while some might choose to continue as members of KKK.

After reevaluating the real situation and discussing it with my team members, we decided to categorize the members into two groups: retired (pencen) and stopped (berhenti). This allows better management and system updates. However, the challenge also involved balancing system simplicity with good data handling. While simplicity was essential for user-friendliness, ensuring that the database met and stored all necessary details for effective administration was equally important.

Analysis:
Creating the tb_tarikdiri table required me to analyze the specific fields and relationships that would support effective member tracking. I had to make sure the table could manage various situations, including members changing their statuses several times. I learned from this experience how crucial it is to predict future difficulties, such the requirement for scalability and managing overlapping statuses. I was able to lessen some of these problems by carefully examining the possible hazards and creating adaptable structures, but as the system expands, more optimizations will be needed.

Conclusion:
I learned from this project how crucial it is to foresee both user requirements and possible system issues. Although the module was successful in making the retirement and resignation procedures better, it also pointed out areas that needed improvement in the future, like scalability and more user-friendly database structures. All things considered, this experience improved my ability to solve problems and understood the importance of teamwork and careful preparation while developing systems.

Self-criticism
I've been able to rethink my approach to system design and challenge my initial assumptions as a result of reflecting on this project. At first, I concentrated my focus on other important features, overlooking the complexity of member management. But as the project developed, I came to see how crucial it was to take user requirements and long-term scalability seriously. In order to collect a variety of viewpoints, I plan to take an active approach to problem-solving in the future and involve users' views early in the design process. Besides, I will keep figuring out what functionality is useful and convenient for our user. Also, my teammates and I will definitely plan well for all different situations before creating the database to avoid big changes after developing. It would be hard for both us and the user.
